

Appendix

Detailed questionnaire (English translation, original in German and French)

Support of social norms

What do you think about the following societal expectations?

[T1: society treatment, T2: immigrant treatment]

Social

1. T1: People should have regular contact with their neighbors.
T2: Foreigners should have regular contact with their neighbors.
2. T1: People should be active in an association.
T2: Foreigners should be active in an association.
3. T1: People should take part in public life in their neighborhood or community.
T2: Foreigners should take part in public life in their neighborhood or community.

Cultural

4. T1: People should participate in local customs, habits and traditions.
T2: Foreigners should participate in local customs, habits and traditions.
5. T1: People should generally practice their religion in private.
T2: Foreigners should generally practice their religion in private.
6. T1: People should respect the values of the Swiss Federal Constitution.
T2: Foreigners should respect the values of the Swiss Federal Constitution.

Economic

7. T1: People should pursue gainful employment.
T2: Foreigners should pursue gainful employment.
8. T1: People should strive for their professional development.
T2: Foreigners should strive for their professional development.
9. T1: People should be financially independent of the state (not receive social welfare).
T2: Foreigners should be financially independent of the state (not receive social welfare).

Political-legal

10. T1: People should be in favor of equality between men and women.
T2: Foreigners should be in favor of equality between men and women.
11. T1: People should always strictly adhere to the law.
T2: Foreigners should always strictly adhere to the law.
12. T1: People should participate in the political process whenever possible.
T2: Foreigners should participate in the political process whenever possible.

Response scale: 0 (do not agree at all), 10 (fully agree)

Integration expectation

Immigrants should integrate into Swiss society. [0 (do not agree at all), 10 (fully agree)]

Citizenship

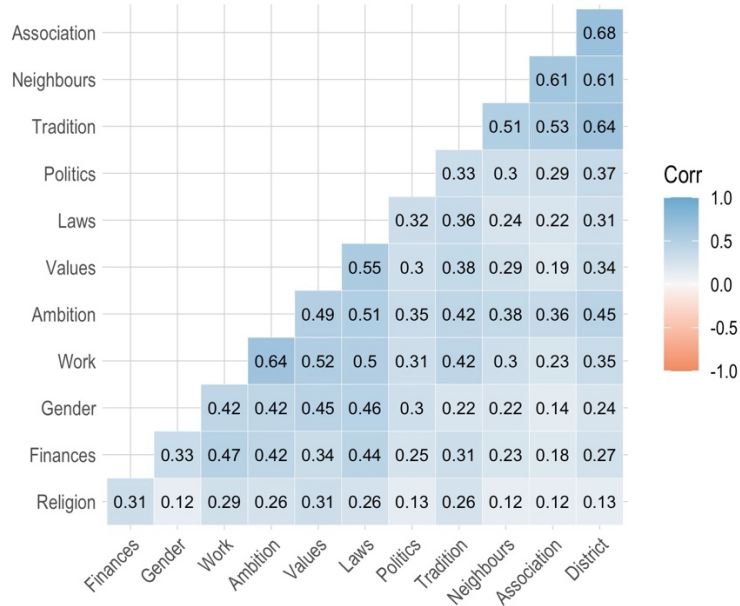

Do you have Swiss citizenship? [Ja, Nein]

Sampling quota

Gender: Male (49.96%), Female (50.04%)

Education: ISCED 0-2 (13.24%), ISCED 3-4 (47.83%), ISCED 5-8 (38.93%)

Figure A1: Correlation matrix of social norm agreement

Note: This plot shows the pairwise correlations between twelve dimensions of respondents' agreement with social norms. Each square represents a Pearson correlation coefficient, with values ranging from -1 (perfect negative correlation) to 1 (perfect positive correlation). The color gradient (red to blue) indicates the direction and strength of each relationship, and the numeric labels provide exact values. Only the lower triangle of the matrix is displayed for clarity. The twelve items are ordered using hierarchical clustering.

Table A1: Model output of question wording experiment

	(1)	(2)	(3)	(4)	(5)	(6)
	Base model	Maximum importance	Swiss citizens	Non-citizens	German-speaking	French-speaking
Immigrant treatment	2.902* (1.225)	4.730** (1.804)	1.892 (1.320)	7.084* (3.145)	5.318*** (1.403)	-3.572 (2.390)
Constant	77.096*** (0.867)	20.080*** (1.277)	77.730*** (0.941)	74.627*** (2.154)	77.345*** (0.992)	76.418*** (1.696)
Observations	1,000	1,000	808	192	730	270
R ²	0.006	0.007	0.003	0.026	0.019	0.008
Adjusted R ²	0.005	0.006	0.001	0.021	0.018	0.005

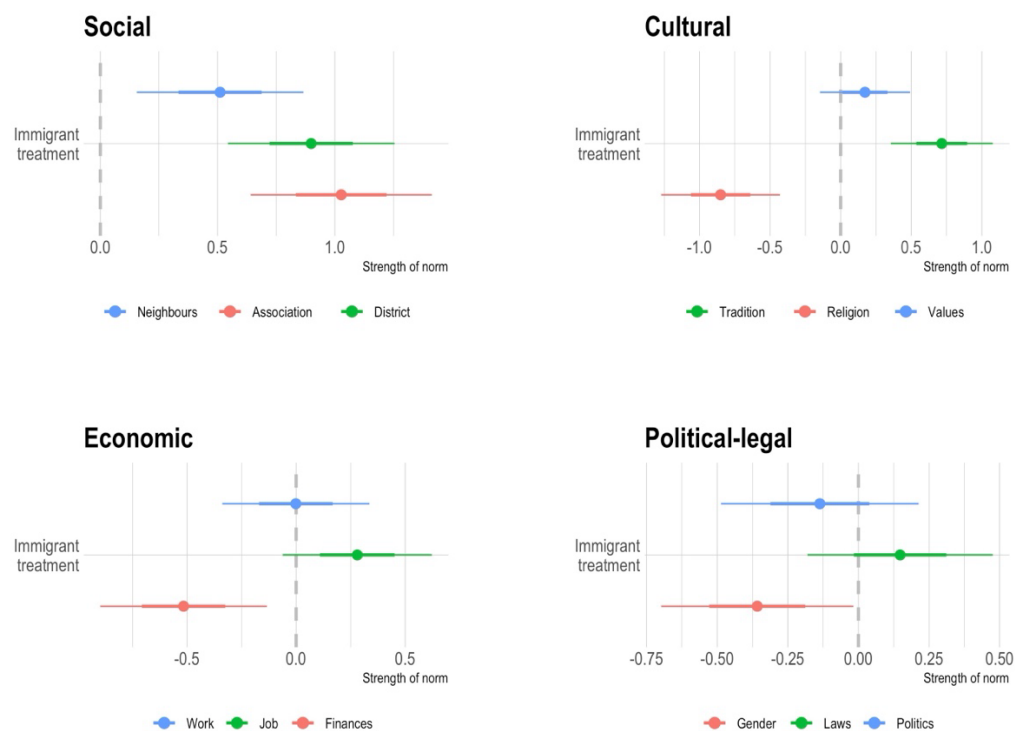

Note: Linear regression models with the norms agreement as dependent variable, Model (1,3,4,5,6) the aggregate sum of agreement of twelve different norms each measured on a scale from 0 to 10, Model (2) the aggregate sum of maximum agreement values, multiplied by 10 to ensure the same scale of the two dependent variables. Model (1,2) are based on the full sample, Model (3,4,5,6) use sub-samples based on citizenship and language region. Level of statistical significance as follows: * < 0.5 ** < 0.01 *** < 0.001.

Table A2: Model output with interaction terms

	Strength of social norms	
	(1) Citizens	(2) Non-citizens
Immigrant treatment	-2.882 (2.480)	-8.642 (6.661)
German-speaking region	1.822 (2.112)	-2.641 (4.695)
Immigrant treatment*	6.814*	19.468*
German-speaking region	(2.918)	(7.538)
Constant	76.390*** (1.811)	76.517*** (3.972)
Observations	808	192
R ²	0.026	0.068
Adjusted R ²	0.022	0.053

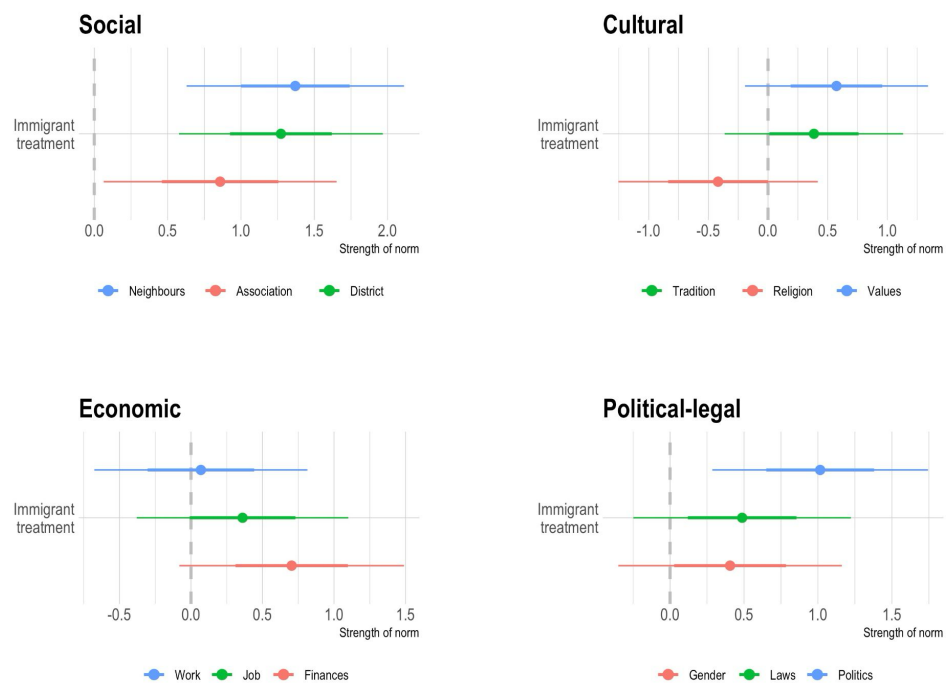

Note: Linear regression models (3) and (4) from Table A1 with additional interaction terms between the treatment and the language region. Level of statistical significance as follows: * <0.5 ** < 0.01 *** < 0.001.

Figure A2: Coefficient plot of migration bias estimates (citizens only)

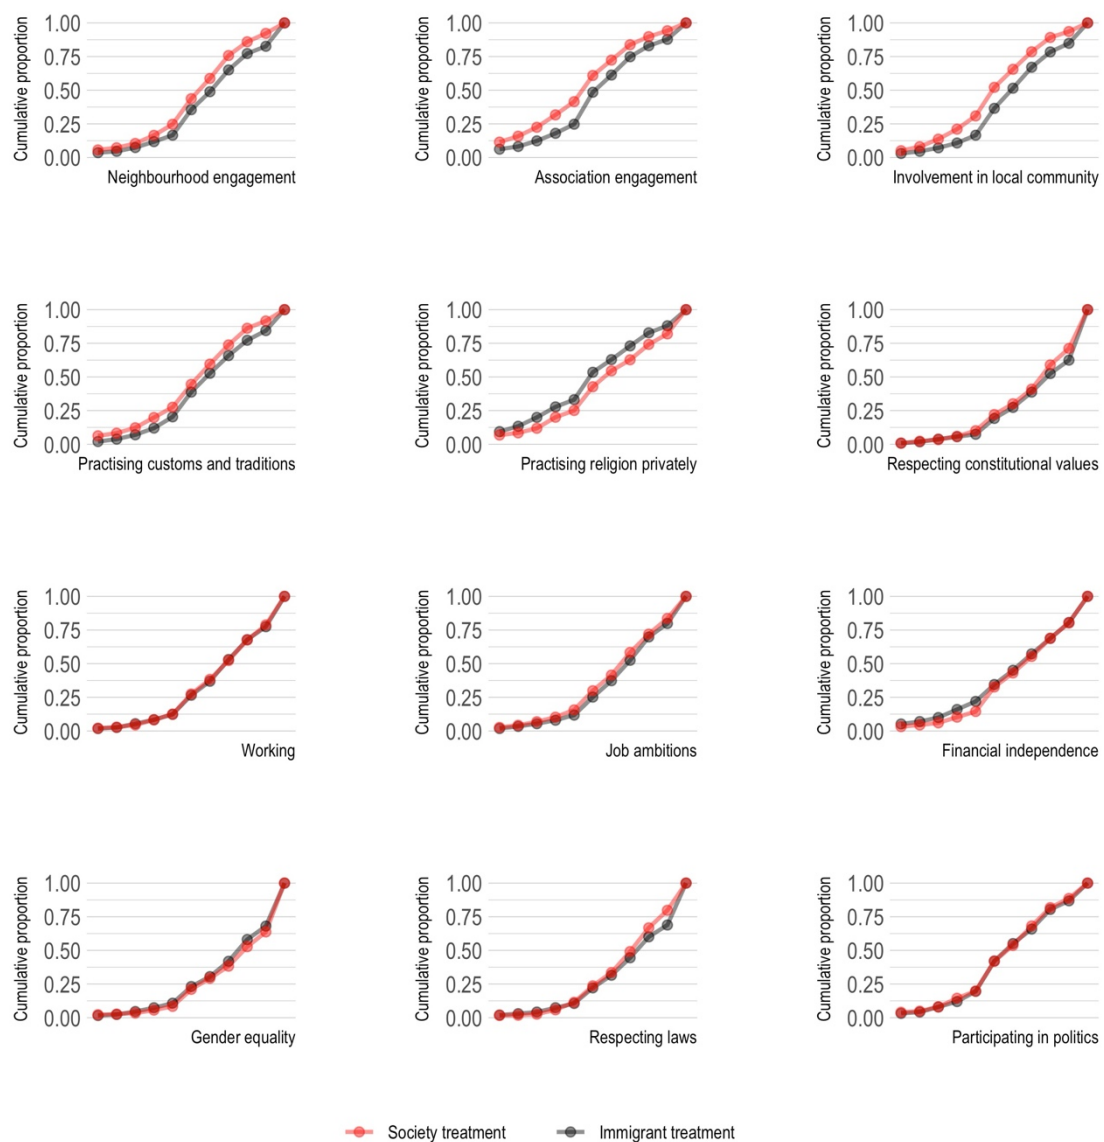

Note: Coefficient plots displaying the effect of the immigrant treatment (versus society at large) on the strength of specific social norms, with point estimate and inner/outer confidence intervals shown.

Figure A3: Coefficient plot of migration bias estimates (non-citizens only)

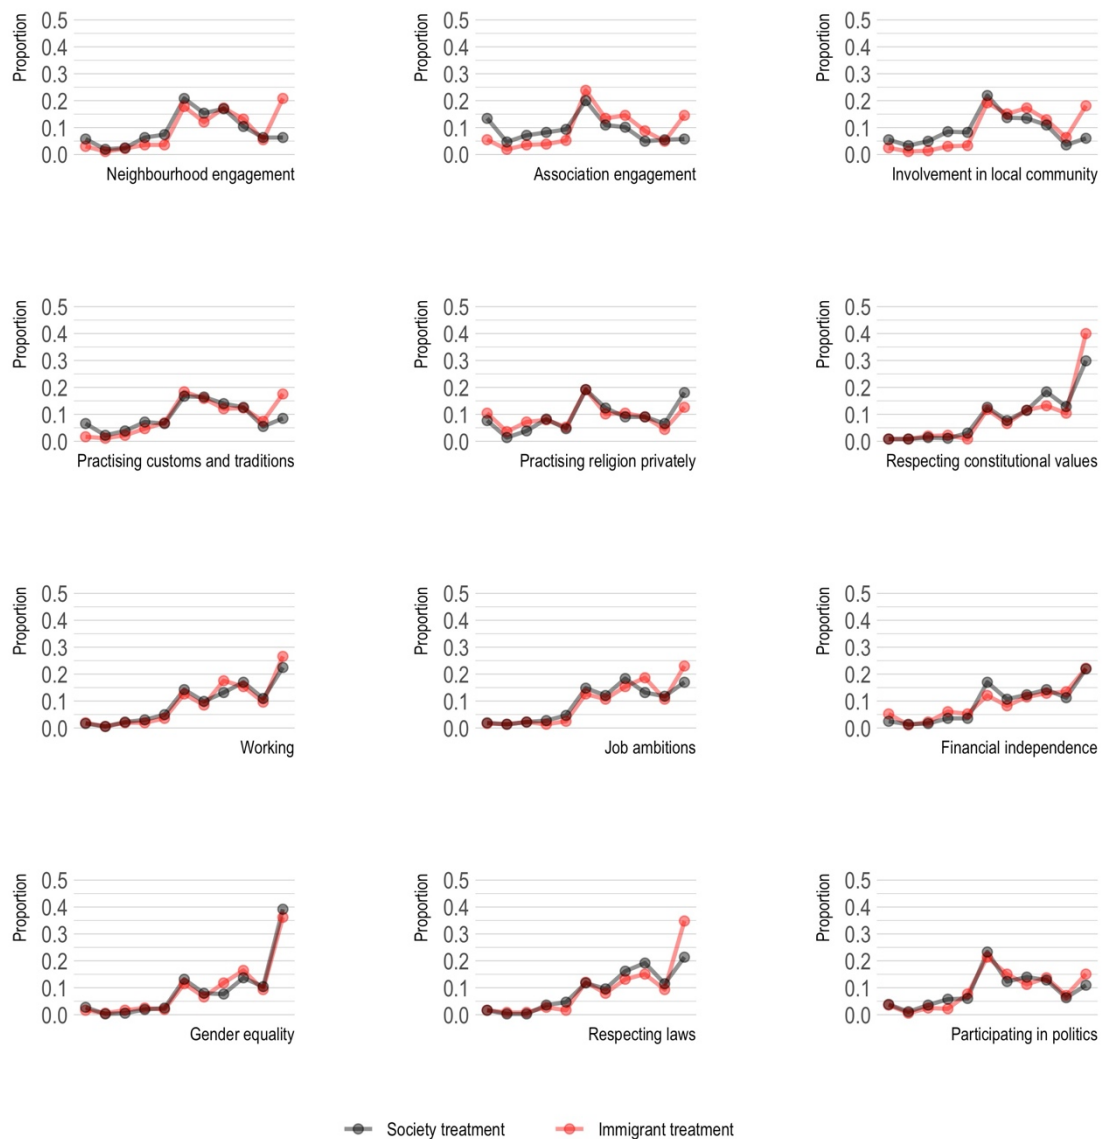

Note: Coefficient plots displaying the effect of the immigrant treatment (versus society at large) on the strength of specific social norms, with point estimate and inner/outer confidence intervals shown.

Figure A4: Cumulative agreement with social norms by treatment status

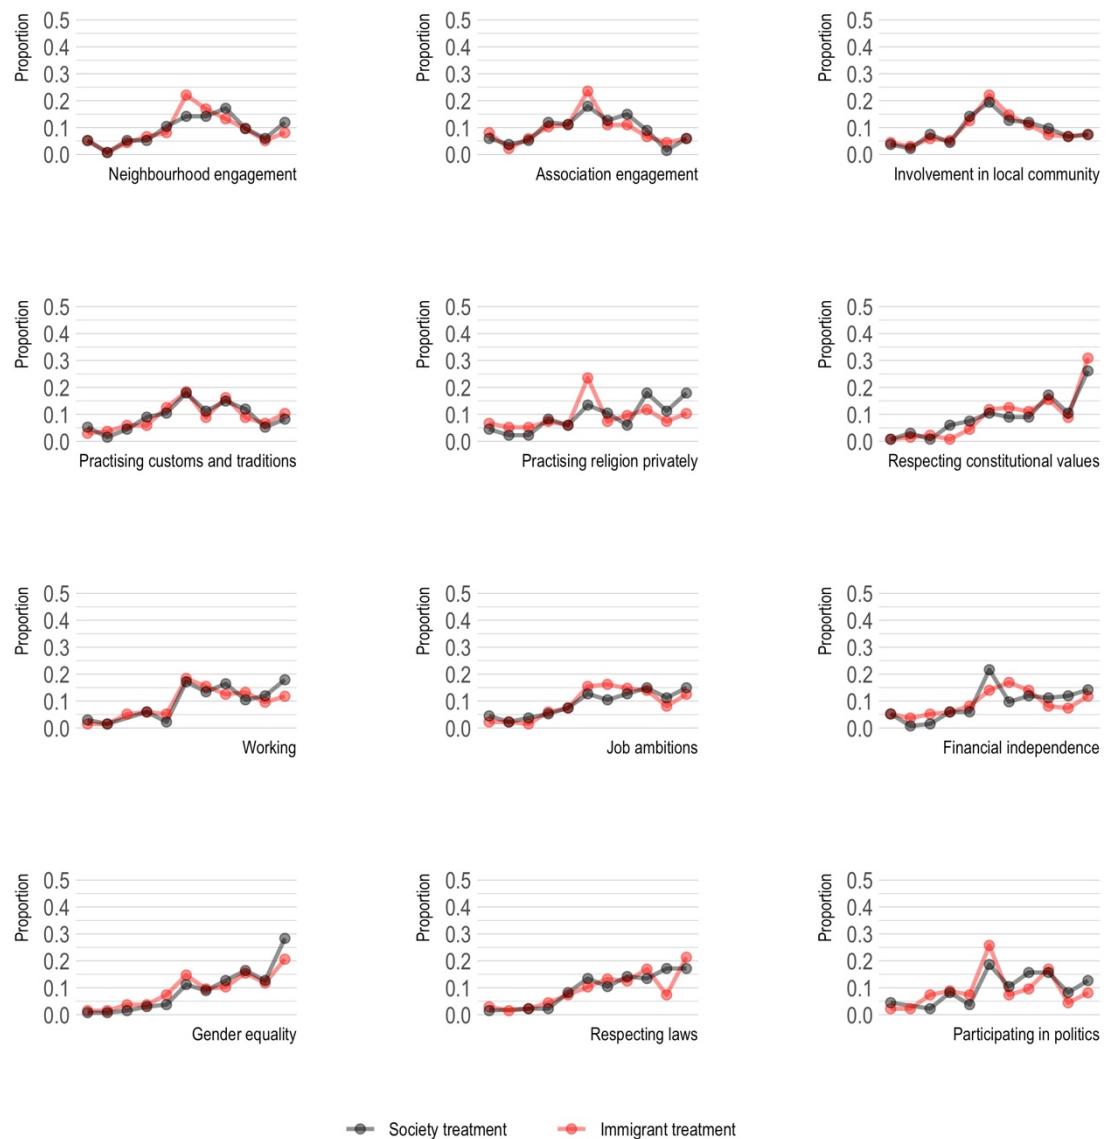

Note: Multiple line plots showing the cumulative proportions of the different values of norm support separated by treatment status.

Figure A5: Norm agreement by treatment status (German-speaking region)

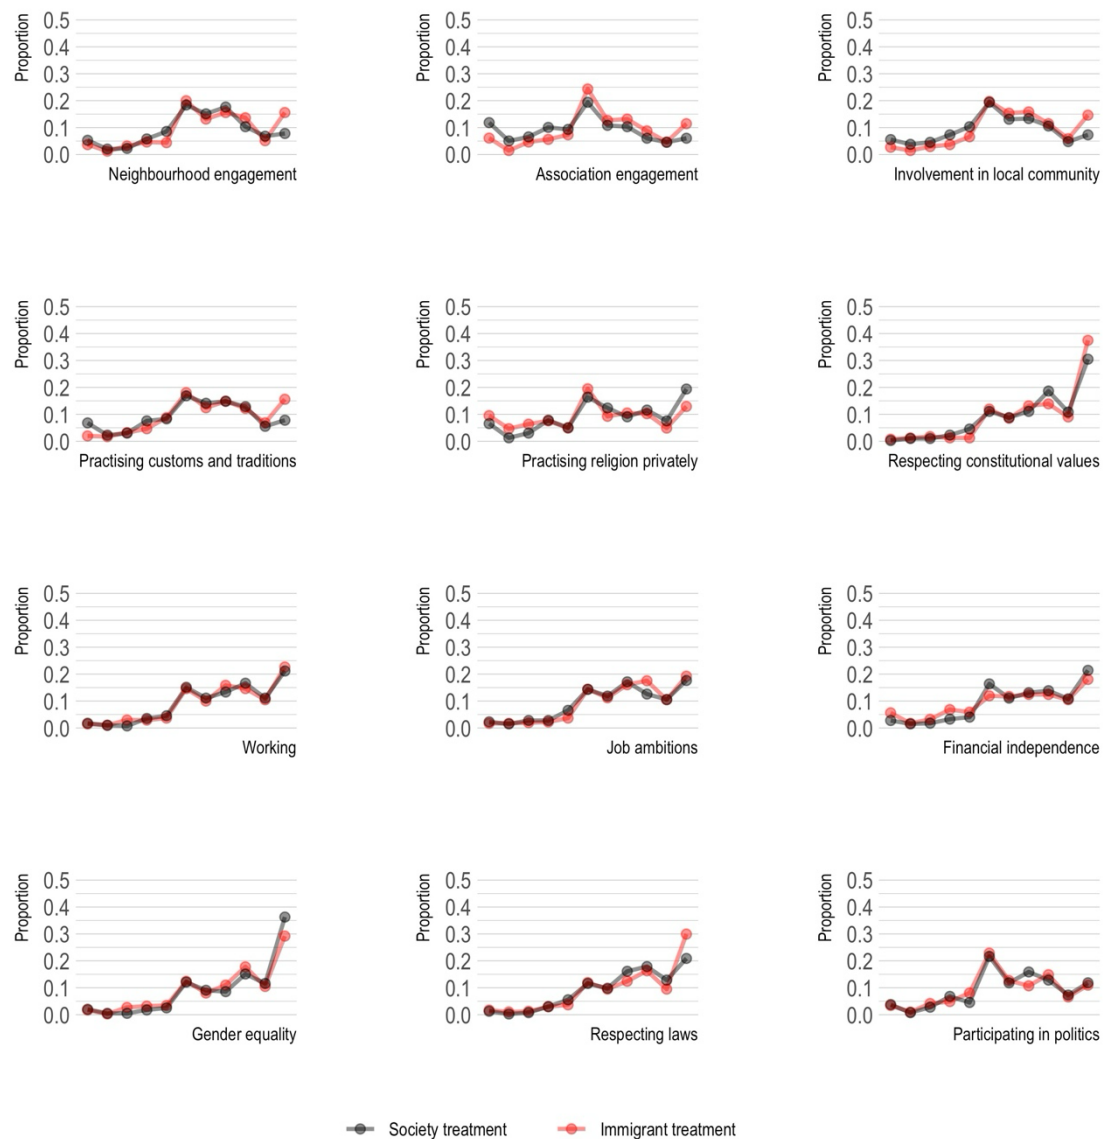

Note: Multiple line plots showing the proportions of the different values of norm support separated by treatment status for the sub-sample of the German-speaking region (N=730).

Figure A6: Norm agreement by treatment status (French-speaking region)

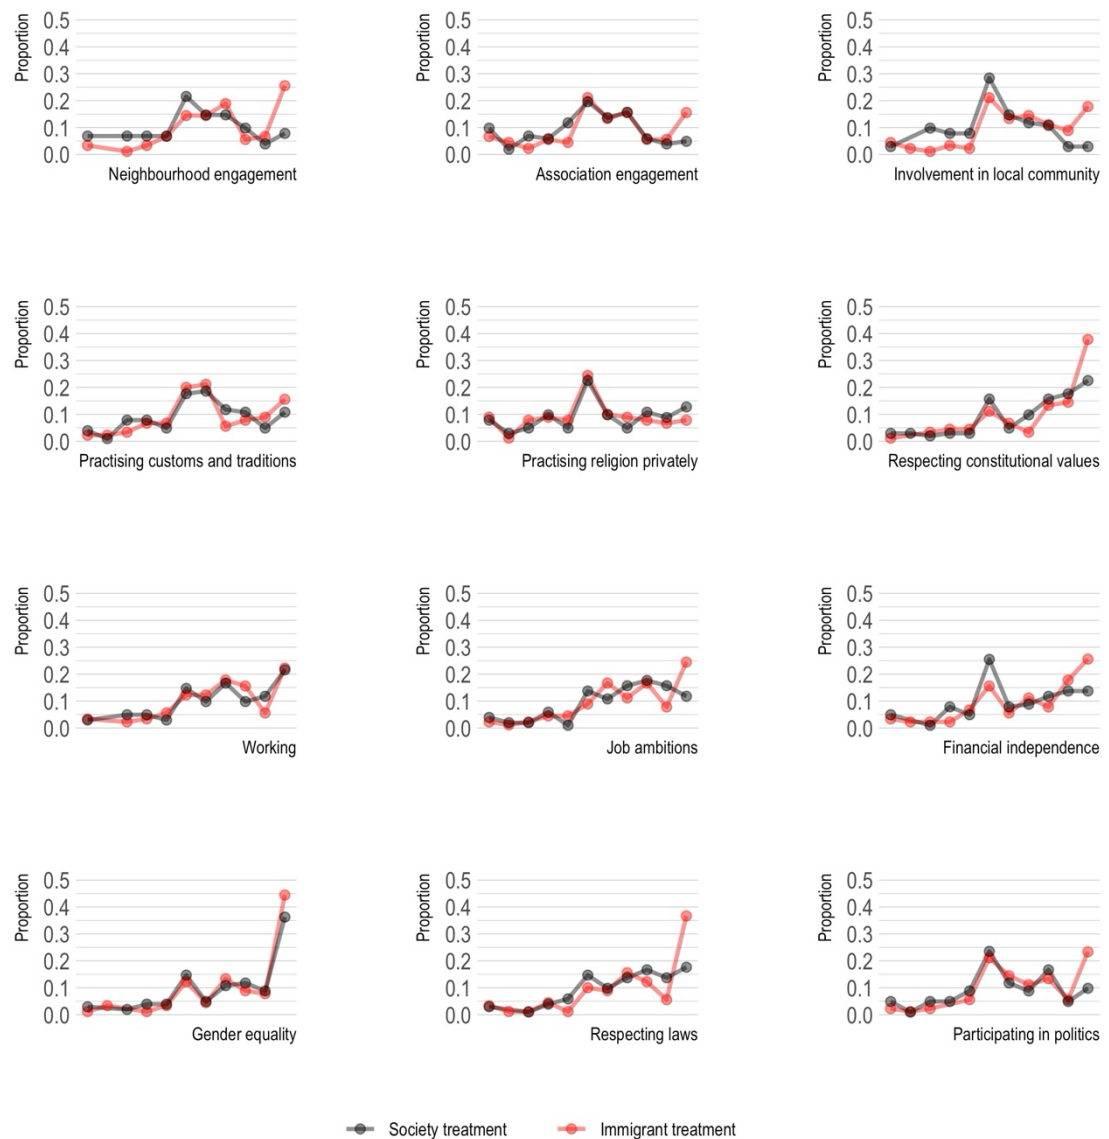

Note: Multiple line plots showing the proportions of the different values of norm support separated by treatment status for the sub-sample of the French-speaking region (N=270).

Figure A7: Norm agreement by treatment status (citizens)

Note: Multiple line plots showing the proportions of the different values of norm support separated by treatment status for the sub-sample of citizens (N=808).

Figure A8: Norm agreement by treatment status (non-citizens)

Note: Multiple line plots showing the proportions of the different values of norm support separated by treatment status for the sub-sample of citizens (N=192).
